# NEBRASKA At-A-glance

### November 2017

**Prepared by** Logan Seacrest, Research Analyst

Maps by Casey Dunn, GIS Analyst

Research Report 2017-5

This third edition of Nebraska At-a-Glance ranks Nebraska in a variety of metrics – from economics to education to taxes. It is designed to provide policymakers and the public with a snapshot of Nebraska compared to other states.

We hope this report can be used as a quick reference or starting point as you delve deeper into policy areas important to you, your districts, and the State of Nebraska. To assure uniformity across states, the data used in this report comes from the U.S. Bureau of the Census and other national datasets.

Nebraska At-a-Glance is issued biennially. It is our goal to make this report as useful as possible. To that end, policymakers, staffers, and the public are encouraged to provide feedback on how this report can be improved in the future.

#### Special Thanks to:

### **DATA & SOURCES**

The tables, graphs, and maps in this report use the most current data available for all 50 states, and in some cases, the District of Columbia. Often, per capita or percentage figures are used to account for population differences between states. Source information is located at the bottom of each page, including a link to the raw data.

States are always ranked from highest to lowest value, without regard to subject matter. Thus, a higher ranking is not always preferable to a lower ranking. Often, two states may appear to have the same metric value, but different rankings. This is because the metric values are only displayed to one decimal place, while the ranking is based on multiple decimal places. For each table, the 50-state average was calculated using a weighted average formula. Unless otherwise noted, rates are determined using the population of adults 18 years old and older.

This year, the rankings feature a symbol indicating whether Nebraska's rank increased, decreased or stayed the same from the 2015 edition of Nebraska At-a-Glance. Each ranking also includes a bar graph comparing Nebraska to the national average and a map illustrating how states rank in comparison to each other. Bulleted text includes supplemental information about the subject, including definitions, additional rankings, and more detailed data.

• Energy consumption is measured in British Thermal Units (BTUs). One BTU is the amount of heat required to raise the temperature of one pound of water, one degree.

In 2016, the average electricity rate in Nebraska was 9.1 cents per kilowatt hour, below the national average of 10.42 cents.

• This ranking is based on arrests of juveniles 17 years and younger, submitted to the FBI by state law enforcement agencies during 2015.

• Because very young children are usually not subject to the criminal justice system, this ranking is calculated by dividing arrests into the state population of 10 to 17 year olds, instead of the entire juvenile population.

• Graduation rate is the percentage of the freshman class graduating in 4 years. It is calculated by taking the total number of diploma recipients in 2016, divided by the average membership of the 8th-grade class in 2011, the 9th-grade class in 2012, and the 10th-grade class in 2013.

30

- The graduation rate for minority students was 70.8% in 2016, slightly below the national average of 78.8%

### • The ACT score range is 1 to 36.

• Approximately 65% of high school seniors took the ACT in 2016, although the percentage varies from state to state. For example, all students in Colorado, Illinois, Kentucky, Louisiana, Michigan, Tennessee, Utah, and Wyoming are required to take the test, but in Maine, only 8% of students took the test.

• Obesity is defined as having a Body Mass Index (BMI) of 30.0 or more, regardless of sex. BMI is a ratio of height to weight, calculated by dividing weight in pounds (lbs) by height in inches (in), squared, and multiplying by a conversion factor of 703. As an example, a person 5' 8" and weighing 197 pounds has a BMI of 30.
