LEGISLATIVE BILL 989

Introduced by Wishart, 27.

Read first time January 11, 2018

Committee: Transportation and Telecommunications

1 A BILL FOR AN ACT relating to transportation; to authorize the testing of autonomous vehicles by a city of the primary class on its roadways;
2 to provide powers and duties for the Department of Transportation;
3 to define terms; and to provide for termination.
4
5 Be it enacted by the people of the State of Nebraska,
Section 1. (1) The purpose of this section, notwithstanding any other motor vehicle law, rule, or regulation to the contrary, is to allow a city of the primary class or a partnership of such city and a private entity or entities to conduct pilot projects involving the testing of autonomous vehicles, if conducted in accordance with the requirements of this section.

(2) A city, either alone or in partnership with a private entity or entities, is authorized to conduct a pilot project for the testing of autonomous vehicles, including autonomous vehicles without a driver, a driver’s seat, a steering wheel, a brake pedal, or an accelerator pedal, if the following practices, procedures, and restrictions are complied with:

(a) The testing shall be limited to an area designated by the city within the city's boundaries;

(b) The autonomous vehicle shall operate at speeds no faster than thirty-five miles per hour; and

(c) Prior to the start of testing an autonomous vehicle that does not have a driver seated in a driver’s seat on a public roadway, the city, or if in partnership with a private entity or entities, the partnership, shall:

(i) Obtain an instrument of insurance, a surety bond, or proof of self-insurance in an amount of at least five million dollars for all claims per occurrence and shall provide evidence of insurance, surety bond, or proof of self-insurance as set forth in the Motor Vehicle Safety Responsibility Act; and

(ii) Submit a detailed description of the testing to the Department of Transportation. The detailed description shall include:

(A) Verification that prior to testing on public roadways, the autonomous vehicle has been tested under controlled conditions that simulate as closely as practicable the real world conditions that the autonomous vehicle will be subject to during the testing, and that the
city, whether alone or in partnership with a private entity or entities, has made a reasonable determination that it is safe to operate the autonomous vehicle on public roadways under such conditions;

(B) Evidence that the city department with jurisdiction over the public roadways of the city approved the designated testing area and environmental, traffic, and speed conditions authorized for purposes of the testing;

(C) Verification that the autonomous vehicle can only operate in autonomous mode in the designated testing area under the environmental, traffic, and speed conditions authorized in the testing;

(D) Verification that the testing complies, or will comply, with National Highway Traffic Safety Administration Automated Driving Systems 2.0: A Vision for Safety, on the safe testing, deployment, and operation of autonomous vehicles;

(E) Verification that the autonomous vehicle used in the testing complies with all applicable federal Motor Vehicle Safety Standards, or written evidence of an exception from the standards from the National Highway Traffic Safety Administration;

(F) Identify to the Department of Transportation the autonomous vehicles that are to be tested on public roadways. For each autonomous vehicle, the manufacturer shall provide to the department the make, model, and model year of the autonomous vehicle, the full vehicle identification number, the license plate number, and the state of registration;

(G) Verification that the autonomous vehicle is equipped with a communication link between the autonomous vehicle and a remote operator to provide information on the autonomous vehicle’s location and status and to allow two-way communication between the remote operator and any passenger participants if the autonomous vehicle experiences any failures that would endanger the safety of the autonomous vehicle’s passenger participants or other roadway users while the autonomous vehicle is
operating without a driver;

(H) Verification that the autonomous vehicle is designed to detect and respond to roadway conditions in compliance with the Rules of the Road and local traffic regulations applicable to the operation of motor vehicles; and

(I) A copy of a law enforcement interaction plan, which shall include information that the city will provide to law enforcement agencies whose jurisdiction covers the designated testing area of the project to inform those agencies on how to interact with the autonomous vehicle in emergency and traffic enforcement situations.

(3) The operator of the autonomous vehicle technology tested pursuant to this section shall disclose to passenger participants in the testing what personal information, if any, concerning the passenger participants is collected by an autonomous vehicle.

(4) For the testing of autonomous vehicles, the Department of Transportation may require data collection for evaluating the safety of the autonomous vehicles, including, but not limited to:

(a) A report to the department of any collision involving the operation of the autonomous vehicle on a public roadway that resulted in property damage or in bodily injury or death. Collisions shall be reported within ten days after the collision in the form and manner specified by the department; and

(b) The submission of an annual report in the form and manner specified by the department summarizing information on unplanned disengagements that occurred while the autonomous vehicle was tested on public roadways.

(5) For purposes of this section:

(a) Autonomous vehicle means a motor vehicle that can guide itself without human conduction;

(b) City means a city of the primary class; and

(c) Disengagement means a deactivation of the autonomous mode when a
failure of the autonomous technology is detected or when the safe
operation of the autonomous vehicle required disengagement from the
autonomous mode.

(6) This section does not limit the authority of the Department of
Transportation to adopt and promulgate rules and regulations governing
the testing and operation of autonomous vehicles on public roadways, with
or without the presence of a driver inside the autonomous vehicle.

(7) This section terminates four years after the effective date of
this act.
