

SENATOR KAHLE: Mr. President and members of the body, it is always interesting to hear a discussion of irrigation and how it affects all of us and how it affects some of us more than others. I have a solution all figured out how to stop all problems, and it is very simple. All we need to do is to install a wind velocity gauge at the pivot center, wire the outside six or eight nozzles to this system and as the wind velocity increases you shut off a nozzle every ten miles or five miles of velocity. This will solve the problem. And, of course, if you really want to get practical, you would also put a booster on the end so that in case the wind went the other way you could steam up the pressure and catch that corn that always dries up on the wrong side of the field. I think it is an excellent idea and if you really want to make it work, that is what we should do. Now, of course, we also said we shouldn't mandate any legislation to the public any more without the state paying for it. So I think we do have a problem there, but it could be done, and I really think that we have the legislation that is needed if the counties will enforce it and it can be done. If you think they are going to shut all the water off of the county roads when the wind is blowing 40 miles an hour from either the south or north, well you are going to think again because it won't be done, it can't be done. It would ruin the economy of the whole country if you tried it. But we can be more particular about how those end guns work and I would go along with that part of it. I think sometimes we are very careless about seeing that they are adjusted correctly. Thank you.

SENATOR CLARK: Senator Haberman, did you wish to close?

SENATOR HABERMAN: Senator Kahle, for your information, the law already says, due to excessive wind you cannot be arrested. So you don't have to worry about that. The law says, a defective end gun. Now you can go down to a farmer and arrest him twice and it is \$10 every time. Arrest him three times, it's \$10, but if you go down and it is a defective end gun and he doesn't get it fixed, it is still \$10. A question to Senator DeCamp. Do you know Brock Reynoldson? Do you know him? R-e-y-n-o-l-d-s-o-n. Yes. Thank you. That is all. Well he is the Director of the Upper Elkhorn NRD. Now the Upper Elkhorn NRD is Rock, Holt, Wheeler and Antelope. It is the county where Senator DeCamp says is the irrigation county of the state. You know what that NRD says? Raise the fine. Raise the fine because we have a problem up here. That is what they say in your territory, Senator
