SENATOR MOORE: Yes, Mr. Speaker, and members, now, Senator
Coordsen, you mentioned that there's been six projects in what
time frame that have exceeded a $100,000 in costs?

SENATOR COORDSEN: According to the information from the
Nebraska Economic Development Commission, there...in the last
three years six training projects were done in Nebraska which
exceeded the $100,000 limit.

SENATOR MOORE: And that is the total cost...that is the total
cost. That includes...

SENATOR COORDSEN: No, no, each of these...

SENATOR MOORE: ...federal funding.

SENATOR COORDSEN: ...exceeded...exceeded...I don't know
that...exceeded, but the cost exceeded a $100,000.

SENATOR MOORE: Well, until I'm proven wrong, I think what
you're talking about is the total costs. I think the body needs
to realize that the money we're talking about here is a $100,000
cap per project.   Now this $100,000 can be used to leverage a
variety of block grants and federal funds. And I think the six
projects that you and Senator Crosby just talked about, that was
the total cost of training and that included the federal funds
and like. I think it's important that the body understands that
this $100,000 cap will be the most that...out of this fund that
could be used to leverage those other type of money.   And
so...and since...it's my understanding, at least, on the usual
case that is, you know, the state's share is somewhat less than
50 percent, obviously, the six you're talking about is a little
misleading because that would be the total cost and that's not
all that this money is intended to do.   This money is
intended...it's a million dollars that $100,000 cap that's the
most that we can use on one project. And I think it's important
even if you do that, at the most ten they could do in a year and
I think that's fair.   I think it would be unwise to adopt
Senator Coordsen's amendment.   At the very least, you may want
to bump it up $50,000 but to remove the total cap I think is
very unwise for this body to do and I think for those of you
that are listening and think that, well, six of these cost over
a $100,000, it's important to point out that is just...that is
the total training cost and we're talking on using   the
