LB 923

amount of training which doesn't hurt anyone. Asbestos is dangerous and so they have to be certified as a means of a license to know that...if they go out and check, they can see whether they have been trained.

SPEAKER BARRETT: One minute.

SENATOR SMITH: Okay, thank you. All right, so, basically, what happens, Senator Wesely, is that a small business some way someone is informing them, that this is a requirement that they have placed upon them within the last year because of the changes that were made there as a bill. Okay, so they have the responsibility, then, because they have been informed, and under these provisions, do they also send them, and this is what I want to have clarified, they send them information about the requirements they have to meet in the training that they, themselves, develop, and then they have to submit a training plan back to the Department of Health to be approved on their employees?

SENATOR WESELY: That is what I understand. Um-huh, like for instance, any business that would be engaged in this would decide they want to continue, and then they set up a training program, have it approved and certified by the department, and then go forward with it.

SENATOR SMITH: Is this a requirement that they have to...I know that you have, you know, if they are within the less than 160 square feet, and 260 linear feet,...

SENATOR WESELY: Um-huh.

SENATOR SMITH: ...they, did they not...they probably don't know in advance if they would ever be in, in other words, are they all required to meet this provision?

SPEAKER BARRETT: Time has expired.

SENATOR SMITH: Irregardless of how small the business is?

SENATOR WESELY: Right, if they fall under the project definitions, they would have to meet the obligations.

SPEAKER BARRETT: Thank you. Senator Nelson, please.
