

February 3, 1992 LB 349

University of Nebraska for education that is costing seven, eight hundred thousand dollars a year now, just from the education aspects of it, and all of the operators out there do have licenses. They are required to follow the labels, and they are required to keep the records of how much of what chemical went where. This bill being implemented in Nebraska does the same thing. How would Nebraska benefit as far as water quality is concerned by having the state take on and spend all this money for the same thing that is being done by the federal government?

SENATOR R. JOHNSON: Well, Senator, we do have through FIFRA the training program that is administered through the Extension Service, which I think you are talking about. Obviously, they have no enforcement, as a university. All they do is basically train personnel to use or properly use restricted-use products. What I envision this program would do is, more than anything else, help us investigate those circumstances that may occur...

SPEAKER BAACK: One minute.

SENATOR R. JOHNSON: ...where a restricted-use product was improperly used. We hope that that would not have to happen but reality tells us, in fact, I believe we had a hearing in Natural Resources on Friday where we are talking about secondary containment of chemicals, and several chemical dealers came forward saying they knew of accidents that happened on on-site or on-farm storage but had not been reported. So we know that contamination does occur periodically by mistake but we have, basically, no enforcement to investigate and I would say that is the biggest aspect of this particular problem or program is that when and if an accident would occur, obviously the University of Nebraska does not have the authority nor the ability to go out and do any kind of investigative work. So this program, obviously, would investigate those problems and hopefully begin the cleanup. But I would go back to my original comment, FIFRA program, as I see it, is designed for prevention...

SPEAKER BAACK: Time.

SENATOR R. JOHNSON: ...and education and I guess that is what I would (interruption)...

SENATOR ELMER: Thank you, Senator. I will put my light on again so you can have some more time.
