

September 30, 1992 LB 29

you to an undertaker, he will shave your face and wash your neck and fix you up so fine. He will dress you in clean underwear and put you in a box of pine. We'll call the preacher in and he'll have a bunch of words to say. Your family and your friends will shed some tears, and then go on their way. We will dump you in the cold, cold ground and cover you with clay. A hundred years or so will pass, but you and your box will stay until you both have melted back to dirt, the very elements you are today. A hundred years or so from now a wildflower will start to grow from the sod 'neath where you lay. It will struggle for a couple of years until the roots get six feet down to your earthly room. When it gets to what once was you, that flower will suddenly bloom. Then a great wild stallion will amble by and eat the flower now blooming because of you. You will then become its muscle and bone, energy for its snort and gallop you will be the fuel. But not all of what once was you will be used by that great wild horse, some will pass on through for that is nature's course. A hundred years or so from now, it don't matter much in time, another old cowboy will come riding by, probably composing some dour rhyme. He will look down spying what once was you now being on the ground. He will wonder why the pile is so large as he works his horse around. Then his face will brighten...

SENATOR CONWAY: One minute.

SENATOR COORDSEN: ...as his horse moves to his touch. Old Jim, he'll say, you ain't changed altogether that much.

SENATOR CONWAY: Thank you, Senator Coordsen. Senator Schrock, please.

SENATOR SCHROCK: Mr. Chairman, members of the body, as a farmer and a livestock producer, I guess it matters a little to me where some of our courses are taught in the State of Nebraska, but I think we should realize that we do not have a school of veterinary science in Nebraska. We do not offer a doctoral degree in veterinary science, and I think it is important that we support one of the largest industries we have in the state and that is cattle feeding, and the two courses that are important to me at Curtis are Feedlot Management and the veterinary technology classes taught there. I don't know whether they can be duplicated anyplace else. That is for the coordinating commission to decide, but I think it is important that we reenforce that we need to teach these classes in a
