

January 25, 1996 LB 584

again, realizing that it will have to pass the muster of the Appropriations Committee and the Natural Resources Committee.

SENATOR HUDKINS: In the handout which you gave to us, you talked about artificial impoundments as well as natural sandhill lakes and streams. Would this be only public facilities that would be improved in this way?

SENATOR HILLMAN: I think only those that Game and Parks are in charge of.

SENATOR HUDKINS: All right, thank you. Also, the dollars that are paid into the fund because of the aquatic habitat stamp, could they be used for funding in any way by the Game and Parks or the Water Resources Board or anyone else to increase or improve the in-stream flows?

SENATOR HILLMAN: No, not at all. They are only to look at improvements in existing facilities that look at, again, looking at the banks that are gradually being washed away, and just improving what would be aquatic life, has nothing to do with in-stream flows. And, again, it would need to be approved by two legislative committees which probably would have a little difficulty with it.

SENATOR HUDKINS: Okay. One final question, the fourth fish on your handout, where it talks about improving streams through bank stabilization and to place structures that would diversify habitat creating riffles. Can you explain what riffles and runs are?

SENATOR HILLMAN: Well, riffles is something that we talked about earlier, and I think the explanation that we had found I wasn't totally satisfied with. Okay, what we have they're saying pools are deeper, if they are pools perhaps in the river or in a lake that's deeper, and riffles are something that are very shallow.

SENATOR HUDKINS: Thank you. Appreciate your answers.

SENATOR CROSBY: One minute. Thank you, Senator Hudkins. Before continuing the debate, Senator Elaine Stuhr has here as her guest today her daughter, Teresa Robbins, and two grandchildren, Chaz and Christian, from St. Joe, Missouri.
