

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office

February 3, 1999 LB 149

next thing you take away from the needs is...and the way I had looked at it is, you take the value of all the property in the state times the local effort rate and that gives you what...what resources you have from property tax. So you take that away and then you get to the amount of aid that you need. But what we do in statute is we set the amount of aid by statute. We've got this \$591 million so we set...we freeze the aid factor. The needs are out there and are always set. What...what gives? What part of the formula fluctuates? The valuation of property is set, so that doesn't fluctuate. The only thing that fluctuates is the other resources. In this case, we had less of those resources, which means you need more aid, and the local effort rate. That's what fluctuates. That's what, in this case, fluctuated down. It went below a dollar. The statute says you can't go below a dollar, so what do we do? That's the problem. It was fro...the statute says it's at a dollar, so if you change the local effort rate and allow that to go down.... When we talk about the \$22 million, and, Senator Bohlke, if I'm...correct me if I'm wrong, \$22 million is what happened last year. We're talking about this year. I don't know what that number's going to be. Twenty-two million dollars is easy to talk about because if everything was equal like last year that's what the figure would be. If you're going to allow that local effort rate to fluctuate, who knows what that aid figure might be. As long as you've got the aid figure set over here in stone...

PRESIDENT MAURSTAD: One minute.

SPEAKER KRISTENSEN: ...you're going to have to have some things give in the formula. And so I think what the problem here is going to have to be is, and if there's a factor, for example, for facilities that there's talked about, that's going to affect the need. So that's over on the other end. That's going to mean more need. So if you have more need, that means more aid at the other end. And if you allow that local effort rate to fluctuate, you may be.... And that's the reason I want to see some numbers before I make too great a commitment. You may have a lot more aid that you need. I don't know. I don't know that anybody knows that. And so as we begin to talk about this, the policy is important, but I keep going back...these bills are not property tax bills. These are state aid bills dealing with what
