February 10, 1999 LB 514

Universal Service Fund, and the pass through of reductions for interexchange carriers in the access charge area, and it also provides for some changes in the internal procedures of the Public Service Commission with respect to two aspects, ex parte communications by the commissioners with regard to pending contested cases, and the ability of the Public Service Commission to discuss in executive staff sessions particular telecommunications issues that are of a complex nature. Now let's simplify this down as much as we can and try to...there will be a handout or two that I will...that I will get out to you very soon so that you can follow along just a little bit better, and let me first address the sunset provision. The Universal Service Fund established by the Public Service Commission and by the Nebraska Legislature right now has a sunset date of June 30th of 1999. The purpose of this fund is to collect a fee or a tax, if you will, on the usage of the telephone for long distance calls, which is placed into a fund for the purpose of providing the necessary rate balancing that we must undertake as a result of the 1996 Federal Telecommunications Act. The Public Service Commission, as you may have noticed, last October issued a proposed order, which was recently made an order, which does set up a process of attempting to reduce the long distance access charges that are imposed by telephone companies in the state of Nebraska, and a way of attempting to provide some funding, if you will, from the Universal Service Fund, to help those companies who have particularly expensive areas of more sparse populations to provide telephone service to. In the public hearing that we had on this bill, some of the testimony showed how complete the Nebraska coverage is of telephones for our citizens. I am...I am extremely proud that in Nebraska, because of the policies of the past and the commitment both of the Legislature and the telecommunications providers, that we have one of the highest rates of telephone availability for our citizens of any state in the nation. There is something like a 96 percent telephone availability for our residents. That is not the case in a good portion of the United States, and I think for the most part, even though all of us always think our telephone bill is too high, that it has been fairly affordable, not for everyone, but for the most of us it's been fairly affordable. And we do have some safety net for those who cannot afford a phone, as well, for emergency purposes, and there is a procedure for people to
