

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office

March 23, 1999 LB 495

they decide to take their operations overseas. What then becomes of those young people who have been given a very restricted, narrow training which is suitable for nothing other than working in a particular business activity, not at the managerial level either? When colleges and universities want young people to select a major, I think that's the worse thing in the world to do. You're 22 years old, maybe 23, some even younger. How do you know at that age what you want to spend the rest of your life doing? If you retire at 65, that could mean engaging in activities that you don't particularly care about for the greater portion of your life, then being bitter and feeling that life passed you by. So along with what Senator Beutler is talking about, we should be thinking in terms of as broad an educational offering as possible. If somebody thinks that he or she wants to work in the field of technology, don't take that away. Make it available, but make it an option among many other options. But those who understand the changing nature of society and the needs of society don't create a system where young people, who, when they're educated a certain way, can be obsolete as the business they are trained for becomes obsolete. In the most highly technologically advanced area, I presume that's what it is, computers, they could not prepare for the fact that after 1999 the year 2000 would come, so everybody trained on computers will have to stop at 1999. The computers will stop. They won't do what they're supposed to do. But the people who run the computer industry are extremely intelligent. They are the only industry, Senator Redfield, who could designate a specific point on...

SENATOR CROSBY: One minute.

SENATOR CHAMBERS: ...the calendar and say, from this point on we're going to make tons of money. Because they set it up so that everything that is operational up to that point, virtually everything, is no longer of value and now you're going to have to go to that industry and spend tons of money to be able to continue functioning. They did it. They got away with it. The society is at their mercy and society is going to pay. Various people at the federal level talk about billions of dollars. Some of the largest states talk about hundreds of millions of dollars to deal with the year 2000 and the impact on computers. The auto industry can't do it. Even if they decided to let all
