

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office

April 14, 1999 LB 791

spend them on the scratch-off where at least the proceeds that come from that are going to a good place such as education and environment. And in order to maintain that,...

SENATOR SCHIMEK: One minute.

SENATOR JANSSEN: ...in order to maintain that, we need to increase the payouts, that is the key. With that, thank you, Madam President.

SENATOR SCHIMEK: Thank you, Senator Janssen. Senator Baker, you are next.

SENATOR BAKER: Thank you, Madam Chairman, members of the body. I tend to have some of the very same concerns Senator Kristensen has and I do have this handout that Senator Janssen was referring to. I originally picked up on this bill with Senator Schellpeper because I was concerned that we should be earmarking some of these funds to what I considered more important projects and one of, I'll just for the record, a few of them, U.S., in Yankton, U.S. Army Corp of Engineers received \$142,000 of the lottery funds for shoreline stabilization; that's the U.S. Army Corp of Engineers, hundred two, forty thousand, \$142,000. That's in 1995. Same year, Scotts Bluff National Monument, \$150,000 for mixed grass prairie habitat. I think there's a Bureau of Reclamation one, and it goes on and on. There are a lot of worthwhile projects but some of these others concern me. Here's another Scotts Bluff National Monument mixed grass prairie, \$50,000. Bureau of Reclamation, U.S. Government Agency, erosion control, \$150,000. So that was my original intent with this bill was to make sure we channel some of those, and I'd be interested in working with Senator Kristensen on making sure that these are used where we think they'd do the most good and not subsidizing an agency of the federal government. Back to the prize payouts, I have a printout here that lists all the state lotteries, and Nebraska is one of the few states that has a maximum payout limit. I see California has one and most of the others don't have one, a prize payout maximum, we're saying here. Prize payout minimums, 40 percent is where Nebraska is. Now we are currently 53 percent, so I repeat a little bit of what I said before. We're not just shooting in the dark here. We were using examples cited from
