April 23, 1999 LB 78

SENATOR REDFIELD: Mr. Lieutenant Governor, members of the body, I would like to address some of the questions that Senator Chambers brought up in his discussion. One of the things I don't know if Senator Chambers is aware of, but that is that there is a different rate charged to commercial customers as opposed to residential customers. Because of the volume, commercial customers are given a preferential rate. One of the issues that you look at when you see utilities begin to compete in outlying areas is the fact that there are some entities, because of the volume, which are preferential for them to obtain. And if they begin to cherry-pick they're going to go after that commercial property. But what that means is that, in fact, the commercial property paying a lower rate, the residential payers throughout the whole entire district, the whole entire city of Omaha actually, could very, very likely pick up the cost of that differential and I think that we would then see, very possibly, that residential rates could go up for those people. So I think it's important that we look at the proportion that we have between commercial property and residential customers within the district. Another issue that I think is brought up and addressed again in this amendment, as well as in the bill, and that is the fact that in the city of Omaha the Metropolitan Utilities District is the only water provider, and currently they are not using their captive audience for their water rates to underwrite the cost of their natural gas. And I think that this bill addresses that and guarantees that that status quo will be maintained so that, in fact, MUD will not be able to come in and charge a captive audience higher water rates in order to be able to go out into outlying areas and give a very preferential rate or lower rate on their natural gas and undercut that competition. Because when two entities compete, I think it's important that their products are the same, and MUD has a separate product. They have a water product and it is absolutely essential to every homeowner and commercial property in the city of Omaha. So I think these are different issues that are being addressed by this bill. I think we are looking at a status quo that has been very effective and I think we want to protect it, and I believe that's what this bill does. It protects a good situation for the people and the ratepayers in the city of Omaha and will guarantee that their rates do stay lower. Thank you.
