April 27, 1999 LB 144

and you will...they will be able to look at how their schools are doing compared to other schools along the lines of that information. The other piece then was, how should we assess the success that we hope, by implementing standards, is there for schools? The Commissioner of Education has spent a great deal of time explaining to the Education Committee the idea that we now have standardized tests in most...in all school districts. In looking at that, they generally measure about 48 percent of the standards. So there is a certain percentage of the standards we are not measuring. The commissioner has put forth a plan that would say each school district may develop their own tests to measure the rest of the standards. And so, instead of one test, you would have the tests they are now doing, the standardized tests, and then each school district may develop their own test to measure the rest of the standards. That's currently that part of the bill. As the committee discussed the plan and then looked at the idea that we're going to have a report card, it was brought forward to the committee that for the first time in recent years, last year, the public schools of Nebraska did not participate in NAEP, which is a national assessment; a majority of all states do. Schools have never been enamored with doing this test, because it does not give the schools any individual information. What it does is tell Nebraska how we're doing as a state, compared to other states. We usually claim that Nebraska ranks right at the top. The NAEP assessment is one way of determining if that is true. Now, there are some people, as I know you're gotten communications, being opposed to saying that the schools have to provide the NAEP assessment, even though through the Appropriations Committee the funding for the substitutes is there. Do all schools have to take NAEP? No, it's a random sampling. And of the random sampling, about one in ten students would be the actual ratio that we're looking at. NAEP just does certain grades, the fourth and eighth grade levels, and they do certain subject areas when they do the test, nationwide. Next up for Nebraska...and I haven't had a chance here...I believe is math and science. Last year, private schools in Nebraska took the NAEP assessment test. I think they usually find it as a tool to compare to how they're doing with other states. Year ago, so far back when I serving on the school board in Hastings, there were some questions that got on the NAEP test that got everyone very critical of were they going to social issues. Since that
