

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office

February 25, 2000 LB 715

time to Senator Raikes, so that he can finish his...whatever he had planned to present.

SPEAKER KRISTENSEN: Senator Raikes.

SENATOR RAIKES: Thank you, Senator Beutler. Just to continue, this listing has each system, the system name, ID number, sparsity category. Weighted formula students is the next column, which tells you how big the...the first one is Kenesaw, the second one is Hastings with 3,580.83 weighted formula students. The next one is a ratio of adjusted weighted formula students to weighted formula students. That is an indicator of how many students in the system are poverty students or ESL students, the demographic factors. Now the calculation of adjusted weighted formula students is not changed; it's done the same way as we currently do it in law. So it's...I'm going to try to make it clear the things we're changing and the ones we're not changing. The next column shows you for that particular system the certified formula need per student that is under current law and was made available February 1 of this year. So that is the certified formula need for the 2000-2001 school year. The next one is the need that this model would provide that system, the need per student. The next column does the subtraction for you, calculates the difference, whether it's a gain or loss. And finally, the last column shows you the allowable growth. And keep in mind now this gets back to the spending history index. If the system is spending at or above needs, its allowable growth will be 1.03, or 3 percent. If it is spending less than needs, then the spending history index calculation allows extra growth. So in the case of Kenesaw, to pick an example, that system happens to gain \$148.84 per student and its allowable growth is increased from 1.03 to 1.06. I think I'll stop there and allow Senator Beutler to continue, and thank you for the time.

SPEAKER KRISTENSEN: Senator Beutler, there's approximately three and a half minutes.

SENATOR BEUTLER: Since my time is abbreviated this time, let me throw in a question to Senator Bohlke that I wanted to ask that shouldn't take much time.
