

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office

March 29, 2000

LB 1234

no longer have 89 octane ethanol. If the 85 comes in, and that is the mixture, the 89 octane ethanol is gone. There will be no 89 octane sold anymore because the only way that the seller could do that is to have 87 octane regular which he or she wants to sell. The low-grade octane must be 87, so the ethanol blend would be this suboctane 85, enhanced to 87 for the ethanol blend. That means you no longer sell the 89 octane because you would have two ethanol blends. So the station which right now will sell an 89 octane ethanol blend would not sell it anymore. It wouldn't make sense to sell it because you'd have to have two ethanol blends, one 87 and one that is 89. I'm going to try to say it a different way. The only way this bill can work and not abolish the sale of unleaded regular is to get that suboctane 85 octane product into Nebraska. There is no guarantee that that will be available. But if it is then you could blend ethanol and raise that octane to 87 and, since the lowest grade would be ethanol at 87 and unleaded regular at 87, you could sell both of them. You could continue to sell unleaded regular because the low blend is also an ethanol mixture. You have 87 unleaded regular, 87 ethanol mixture. So if you were going to have three tanks, you would have one with unleaded regular, you would have one with an ethanol blend of 87, and you would have premium, but 89 octane ethanol would be gone. It wouldn't be available anymore unless the owner wanted to put in a fourth tank and have two ethanol blends. This bill produces nothing but problems. It cannot in practicality work to benefit the consumer who wants to have unleaded regular available, but it does benefit Cargill, and what I want my good friend Senator Dierks to be aware of is that there are corporations on the ethanol side too and, Senator Dierks, Cargill is not the best friend of the corn producer. You probably think they are, but I don't. It's to their advantage, whether you have ethanol at all, to keep corn prices depressed. Why? Because they buy it cheap and sell it dear, and they don't just sell it in America. Oh, you said time? Oh. They don't just sell it in America. They sell it wherever in the world that they can and they have the wherewithal to do that. The producer doesn't get anything. Corn is \$2 a bushel. But when I buy Jiffy Mix Cornbread it's not any cheaper, unless they're not making it out of corn. They gave some cookies here yesterday to everybody. Those cookies were made out of ethanol and, Senator Redfield, if you put that cookie in your tank you'd be a pillar of salt by day and a ball of fire by night, ethanol
