

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE  
Transcriber's Office  
FLOOR DEBATE

April 15, 2003      LB 435

2005, two years off. So that, effectively, what you would have with the bill, if you adopted this amendment, would be a bill that simply kept up with the increases in inflation over the last six years and anticipated 2 percent inflation for an additional year in the future, because it will be several years before we come around to a bill like this again, in all probability, if we pass this one. So it would be a bare-bones kind of upkeep bill on the minimum wage. I wanted to indicate to you, I understand, of course, that there is opposition from some or a majority of the business community perhaps. But on the other hand, any time you ask the average American about the minimum wage, they will tell you they would like to see it increased. And I wanted to cite three or four polls for you. In January 2002, a poll for the Ms. Foundation found that 77 percent of likely voters surveyed support raising the minimum wage from \$5.15 to \$8 an hour; some 79 percent of likely voters support regular increases in the minimum wage to address the effect of inflation on the real value of the minimum wage. And that's what we're doing with this bill now if you adopt the amendment. A November 2001 survey conducted by Techno Metrica Institute of Policy and Politics for Investor's Business Daily and The Christian Science Monitor found that 75 percent of the survey respondents supported raising the minimum wage as a way to stimulate the economy. An October 2002 survey by the Gallup Organization, CNN and USA Today found that 81 percent of the of the respondents supported an increase in the minimum wage. A survey conducted in January and February, 2001, by a National Public Radio, the Kaiser Family Foundation and Harvard University's Kennedy School of Government found that 85 percent of Americans support raising the minimum wage. In a January 2001 poll of Peter Hart Research Associates, 83 percent of respondents favored increasing the minimum wage by a dollar. When asked to imagine that they could vote on issues on election day, 82 percent of respondents in an October 2000 Gallup poll said they would vote to raise the minimum wage by \$1. The public supports raising the minimum wage by a substantial amount by a substantial number of the public, and I don't suspect that that would be much different in Nebraska. Over the lunch hour, I went back and I got the unemployment rate in Nebraska since 1978, when we started to calculate the minimum wage on a uniform system, and the unemployment rate in Nebraska since 1978
