FLOOR DEBATE

May 1, 2003

LB 754

SENATOR BEUTLER: Well, let me refresh your memory and then I'm sure the great point will come up. We were talking about the sentence that has to do with changing the idea of any relevant information being subject to a request and review in order to make a final determination as opposed to reasonable information. And you gave us a good description of some of the dimensions of reasonableness as you viewed it, but here is a question I want to get to, the thing that concerns me the most and maybe the thing that I think is almost irreconcilable but yet may be the crux of this matter. Is it reasonable to ask a producer to show the plan for his facility construction to the board? I mean, here's what I'm getting to, and let me just lay the whole thing out and then you can comment. It is within the purview, the legitimate purview, of a county board to protect the environment in the county. That's DEQ's responsibility, but it's also a local responsibility. And to the extent that they know the area better and think that there might be some additional requirements that are pertinent to that area, they do have and rightly should have the authority to do what's necessary to protect the ground water or to otherwise protect the environment. With respect to hog operations and, to some degree, with cattle operations, the large ones, the construction of the waste lagoon, the construction of the facility, the orientation of the facility to the land, the type of land that it's on, the type of soil that's involved, I can quite easily see how a conscientious county commissioner would actually want to see the site, would actually want to know what you're going to construct, would actually want to know the dimensions of a lagoon, the composition of the materials used to construct the lagoon, the number of animals in your operation. And I'm thinking that maybe the legitimate information basically kind of approaches what you need to do to get a permit from DEQ. Because they're going to be asking the same question--is the environment protected by what you're doing? And is it too cynical to suppose that one of the things you're trying to avoid, not you personally but just in this sort of thing, is to avoid a review of environmental questions by local county officials? Because I just have trouble seeing how they're going to do that adequately in this situation unless they ask for the complicated plans of the engineers, which are expensive, I know.
