FLOOR DEBATE

May 5, 2003

LB 754

Would that be correct?

SPEAKER BROMM: No, that would be an advisory...they are in an advisory position so it would not be a decision that I think...that I think has never been appealable, nor would it be in this instance either.

SENATOR BEUTLER: Okay. So they are appealable but not until such time as actually whoever it is that makes the final decision has made it. Is that a correct way of stating it?

SPEAKER BROMM: That's my understanding. I think that's correct.

SENATOR BEUTLER: Okay. And then I wanted to be sure about two different things, and when we talked about these the last time a little bit and I think I understood your answer, but I wanted to be clear on what the conditions might be that were part of the final determination. And as we had our discussion last time, they could be conditions with regard to process, as well as conditions with regard to specific substantive items. Let me throw out two things in particular. If the information that's provided by the applicant as they are going through the process of making a final determination, if it turns out to be inaccurate or to be substantially incomplete, the board can protect itself against that possibility by giving as a condition, for example, the fact that the permit is conditioned upon accurate information, and substantially complete information.

SPEAKER BROMM: Certainly, I would say that if as part of their findings or their conditions they wish to state that the determination that they're making is based upon the information provided by the applicant and the accuracy and completeness of that information, and so should it turn out that information was not accurate, then when it comes for them to review it and decide whether they're going to issue the permit or not, they'd be perfectly within their rights to say, based on the fact that information was not accurate that we made the decision on, we now reject the permit unless you, you know, can show us that...
