

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE  
Transcriber's Office  
FLOOR DEBATE

May 5, 2003

LB 602

Legislature, ignorance, fear and superstition have always been the enemies of scientific research and utilization of scientific discoveries. What some of my colleagues may not know is that the churches called the sewing machine an implement of Satan and ministers preached against it as a sin. They preached against Benjamin Franklin's invention of the lightning rod and said, if God wants to strike a building, who is man to interfere, as though a man can defeat the will of God. Electricity was opposed as an invention of the devil, and it was against church doctrine and laws to dissect human bodies. So whenever something new and different comes along, ignorance rears its head and, because people don't understand it and their superstition comes into play, and ghosts, demons and goblins, witches and tiki gods control their thinking, they automatically say that is wrong. But if they go back to the Bible, the men and women were told to have dominion over the universe, to master it. Dominion means complete control over and utilization of. I'd like to ask Senator Smith a question or two. Senator Smith, ... is Senator Smith back there?

SPEAKER BROMM: Senator Smith, would you...

SENATOR CHAMBERS: Senator Smith.

SPEAKER BROMM: Excuse me. Would you yield, Senator Smith.

SENATOR SMITH: Yes.

SENATOR CHAMBERS: Is a sex cell a somatic cell?

SENATOR SMITH: Not to my knowledge.

SENATOR CHAMBERS: Do sperm consist of cells?

SENATOR SMITH: I would have to double-check on that.

SENATOR CHAMBERS: If they don't consist of cells, what would they consist of?

SENATOR SMITH: One sperm is a cell that then would join the egg.
