

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

January 22, 2004 LB 602

SENATOR SMITH: Well, we found that collecting 10 eggs per donor...I mean it's hard to say what the treatment would need, but with cloning efficiency and so forth, we're looking at requiring a minimum of 850 million eggs to treat 17 million diabetes patients in the United States.

SENATOR REDFIELD: Okay. So 850 million eggs at the numbers you gave us here, 85 million women would have to donate an egg or eggs, plural, eggs?

SENATOR SMITH: That's right.

SENATOR REDFIELD: Eighty-five million women. Where are we going to find 85 million women to donate eggs for one disease, let alone the litany that we heard about? There are some health risks that I wish I had known when I had the conversation with my daughter. I was not aware of that there are some high-dose hormone therapy involved. Do you know any details about that, Senator Smith?

SENATOR SMITH: No. All I know is that it is risk oriented.

SENATOR REDFIELD: Okay. Do you think that there would be any exploitation of women who might be low income who might see this as a source of income to sell eggs, Senator Smith?

SENATOR SMITH: Absolutely.

SENATOR REDFIELD: All right. Thank you, Senator Smith. I think that this is another whole avenue...

SENATOR CUDABACK: One minute.

SENATOR REDFIELD: ...that we have not discussed here. Where are we going to get the eggs to start the process? Who's going to donate them and, again, are we going to victimize women? I think that's a serious issue to discuss, and I am supporting LB 602. I think it's important to go slow on this issue. Thank you, Mr. President.

SENATOR CUDABACK: Thank you, Senator Redfield. (Visitors
