

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

April 8, 2004 LB 958

It's not even a feeling. It is a collection of erroneous notions that a person absorbs because he or she hears them articulated all the time and they are accepted without analysis, they are taken for granted and form the starting point of a lot of arguments, and it's why a true scientist will not argue science with a layperson. A layperson says, well, I just don't believe, and the scientists say, we can't talk. You want to deal with belief. You want to deal with superstition. You want to deal with luck, hope and praying, and I want to talk about what is factual in the sense of being demonstrable; that when you have a certain set of factors and you treat them in a certain way, you can predict the outcome, and when you have this set of factors you will always get that outcome every time you try to demonstrate. Now, when...

SENATOR CUDABACK: One minute.

SENATOR CHAMBERS: ...we come to what Senator Foley and I are talking about, he is talking about superstition. The proof of it is that he must believe, as do those who support his bill, that a single cell, which is what a zygote is, is a human being, capable of being physically assaulted and subject to serious bodily injury and the deprivation of the use of one of its limbs. It has no body. It has no limbs. But you're being asked to ignore that and draft a statute that will suggest that...no, that would declare that. Thank you, Mr. President.

SENATOR CUDABACK: Thank you, Senator Chambers. Senator Foley, followed by Senator Maxwell.

SENATOR FOLEY: Mr. President, I was distracted. Did you call on me?

SENATOR CUDABACK: And Senator Maxwell.

SENATOR FOLEY: Oh, Senator Maxwell. Thank you.

SENATOR CUDABACK: I said Senator Foley, but then Senator Maxwell.

SENATOR FOLEY: Which (inaudible)?
