FLOOR DEBATE

February 1, 2006 LB 975

area.

SENATOR SCHROCK: There will be no new facilities in that two-mile area. There will be no expansion within a one-mile area. But a current facility within one mile to two mile can expand if the DEQ determines they will not pollute.

SENATOR CHAMBERS: Okay. Now I got clear what you had said earlier. Here's...

SENATOR SCHROCK: And I don't always say things clearly, so I appreciate your being involved.

SENATOR CHAMBERS: Well, sometimes I don't listen closely.

SENATOR SCHROCK: (Laugh) Okay.

SENATOR CHAMBERS: When we look at page 6, we see where the university may expand if the department determines, based on scientific information provided in the application or other available information, that the proposed expansion does not pose a potential threat to the stream. When they say "other available information," they must mean nonscientific, isn't that true?

SENATOR SCHROCK: I think...

SENATOR CHAMBERS: Because they've already said, scientific information or other available...and I would insert, nonscientific information. If it's scientific, then it's covered by the first clause.

SENATOR SCHROCK: Well, they can develop their own scientific information, Senator Chambers, the department can. And...

SENATOR CHAMBERS: So this "other available information" means what? Other scientific information?

SENATOR SCHROCK: Well, I don't...if it isn't scientific, I don't think the DEQ would accept it, Senator Chambers.
