

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

March 22, 2006 LB 968

the supply or the production and the demand, and I think many worried about over the...worried about this over the years, that we were going to incent too much production and not have the demand for it. It was kind of a chicken and egg situation. And that's what's happened the last two years in the spring and this year again in the spring, whereas attainment cities...nonattainment cities--Atlanta and Denver come to mind--have to have ethanol at this point to meet their nonattainment goals and so they have outbid, in many cases, the amount of ethanol that Nebraska is producing. I think I'm correct in saying that nearly all ethanol production in Nebraska right now is going out of state, and it's one of the reasons that we are paying a little higher price for it, because the supply and the production...production and the demand are not in alignment. If we get more plants on line, another year or so, I think that will, I'm understood, it will...there are going to be more...it will be more probably price neutral, if you will. I think we have this obligation, whether we like it or not, in some cases. We have this obligation to fulfill these contracts. We have incented the ethanol industry in Nebraska. It's benefited everyone, from my mind, from the amount of property taxes that are paid locally, to creating good jobs in rural Nebraska, providing additional price for corn in local markets, to providing feed for livestock. I can't see a downside to it. And every day, every...I should say every month, almost, we're learning new...about new research that's showing that we are now getting about one unit of BTU energy out of...or 1.6 BTUs of energy out of 1 BTU of energy expended. Contrast that to gasoline, where you get .8 of a BTU of energy out of 1 BTU in its original form. So ethanol is becoming more and more efficient and it looks like, through further research, we're going to do more and more. So it looks like, to me, that we have done what we've intended to do in Nebraska. We have a strong and thriving ethanol industry that is now standing on its own, and we simply have to fulfill our requirements. And in my thinking, the sheet that I have...

SENATOR CUDABACK: One minute.

SENATOR WEHRBEIN: ...is probably...I think Senator Landis' sheet was showing the...probably the worst possible case
