

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

March 22, 2006 LB 968

enough money to meet our obligations in the next year or two, then we can address that when it...

SENATOR CUDABACK: One minute.

SENATOR KREMER: ...when it comes. So I think it's very appropriate and I will support the bill. Thank you.

SENATOR CUDABACK: Thank you, Senator Kremer. Senator Wehrbein, followed by Senator Chambers.

SENATOR WEHRBEIN: Yes, Mr. President and members of the Legislature, I don't want to prolong the debate on this particularly, but two things. One, Senator Chambers, they...one of the last works done, that I admit I can't find the article that I read, on the efficiency of ethanol production was done by the University of California, Berkeley, and they confirmed a lot of what has been said in the last few months or in recent times about the efficiency of conversion. And I figured...I thought maybe being the U.S., University of California, Berkeley, it would have an impact on you, because it's...I don't think it's Senator Raikes' alma mater, but it's close out there, alma mater. The other thing on ethanol, I think we have the obligation, I want to separate this too, we have the obligation to fulfill this. Whether we disagree about the future is another issue perhaps, so I want to assure that I oppose the amendment and think that we do have the obligation to do it because we made that commitment in the past. We have the plants in place. They are fulfilling what they're doing. No production equal no dollars, so there are some probably going to struggle in the future. We're not going to have to pay those if they're not producing. So we got exactly...it was done exactly the way we framed it. If they produce they get paid; if they don't produce they don't get paid. So they've met their obligation; we should meet ours. Secondly, on energy, I'm more optimistic than Senator Chambers is in the future for replacement of energy, and it doesn't necessarily all come to ethanol. We're going to be switching probably to...switching to switch grass. (Laugh) We're going to be using switch grass for some things, probably. There's lots of research going on. I think it's one of the real causes for optimism in agriculture
